

Jessika Miranda

Frontend Software Engineer | React, Next.js & TypeScript

São Paulo, Brazil | +55 11 99926-3201 | jeessika.miranda@gmail.com | LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Frontend Software Engineer focused on React, Next.js, and TypeScript, with experience building and modernizing enterprise applications, defining scalable front-end architecture, and delivering complex business workflows. Previously led a team of 4 Frontend Engineers in a multi-tenant ERP ecosystem serving approximately 650 active companies and currently owns the front-end development of a greenfield enterprise platform.

TECHNICAL SKILLS

Frontend: React.js, Next.js, TypeScript, JavaScript, HTML5, CSS3, Tailwind CSS, Responsive Web Design

UI & Application Development: shadcn/ui, TanStack Table, React Hook Form, Zod, Figma, Component Design

Architecture & Integration: Front-End Architecture, Authentication, Role-Based Access Control (RBAC), Protected Routes, Internationalization (i18n), REST API Integration, Multi-Tenant Applications

Testing & Tools: Vitest, React Testing Library, Playwright, axe-core, Git, GitHub, Supabase, Vercel, Zustand

PROFESSIONAL EXPERIENCE

Senior Frontend Engineer

Collab Holding | Apr 2026 – Present | São Paulo, Brazil | Remote

- Lead the front-end development of a greenfield enterprise platform as the sole Frontend Engineer, defining architecture, reusable patterns, and development standards using Next.js, React, TypeScript, Tailwind CSS, and shadcn/ui.
- Built the platform's core front-end infrastructure, including authentication, role-based access control (RBAC), protected routes, and internationalization across 3 languages.
- Develop dashboards, reusable data tables, filters, forms, and complex management workflows while collaborating directly with back-end engineers on API contracts and technical decisions.
- Own front-end technical decisions and establish scalable foundations designed to support multiple business areas and future engineering teams.

Lead Frontend Engineer

idworks - muito mais que ERP | Jan 2025 – Apr 2026 | São Paulo, Brazil | Hybrid

- Led a team of 4 Frontend Engineers in a multi-tenant ERP ecosystem serving approximately 650 active companies, defining front-end architecture, development standards, code review practices, and production releases across multiple products.
- Modernized approximately 75% of the platform's main screens by refactoring legacy class-based React components into functional components, improving maintainability and preparing the codebase for framework and dependency upgrades.
- Designed and developed a complete Point of Sale (POS) solution spanning sales, cash register operations, inventory, promotions, returns and exchanges, and TEF payment integrations for credit, debit, and PIX.
- Built a visual ZPL label designer with drag-and-drop editing, direct code editing, dynamic variables, QR codes, and multiple barcode formats, reducing a support-dependent process with a turnaround of more than a day to a self-service workflow completed in minutes.
- Contributed to hiring and team management by creating the front-end technical assessment, conducting technical interviews, and participating in performance and compensation decisions.

Frontend Engineer

idworks - muito mais que ERP | Oct 2024 – Jan 2025 | São Paulo, Brazil | Hybrid

- Joined the company to help modernize a large React-based ERP ecosystem, refactoring legacy class-based components into functional components and improving maintainability across core modules.
- Expanded from feature development across 6 products, including ERP, HUB, WMS, TMS, POS, and OMS, into front-end architecture and technical decision-making, leading to promotion to Lead Frontend Engineer.

Telecom Analyst

Delfia | Dec 2023 – Oct 2024 | São Paulo, Brazil | Hybrid

- Monitored business-critical payment processing environments and coordinated with mobile network operators to minimize service disruptions and maintain operational continuity.

Frontend Engineer

TC | Sencon | Jan 2022 – Jun 2023 | Rio Grande do Sul, Brazil | Remote

- Contributed to the migration of Sencon’s front-end platform from Angular to React and TypeScript after the company was acquired by TC, redesigning 100% of the application’s screens and user flows in Figma to align the product with TC’s technology stack.
- Designed and developed a custom internal workflow management platform, owning the front-end from design through implementation and delivering drag-and-drop task management, configurable process flows, REST API integrations, and responsive interfaces.

PROJECTS

Flowy — Client & Project Operations Platform

Next.js, React, TypeScript, Supabase, Tailwind CSS, shadcn/ui, TanStack Table

- Designed and built a full-stack SaaS-style operations workspace for managing clients, projects, and tasks with authentication, Row Level Security (RLS), real CRUD workflows, reusable data tables, filters, forms, and internationalization.
- Built reusable front-end patterns and responsive interfaces with a focus on maintainability, consistency, and product usability.
- Implemented unit, component, end-to-end, and accessibility testing using Vitest, React Testing Library, Playwright, and axe-core.
